

Since primary school, mathematics is a key subject at school. You have learnt to add, to subtract, to multiply and to divide numbers and to solve problems. You know a lot of things like fractions equations, exponents, square roots and many other things! You've learnt theorems, such as the Pythagorean Theorem! But who are the people that "create" maths? Evidently, the mathematician called Pythagoras, is the person responsible for the Pythagorean theorem, but have you ever heard about any other "famous" mathematicians? Can you think of three names of people who are important in the field of mathematics?

If this question seems a little difficult, you can search the internet, your books or even ask people you know.

When you decide on the three mathematicians you want to include, use the link on the next slide to fill in the names! A word cloud is going to be created!

You should also write a small text (2-3 sentences) to explain why this person is important for the mathematical science!

Instructions

Write the names of 3 important mathematicians!
